DESCRIPTION

Buffer-type power supply units are intended for continuous power supply to devices that require stabilised voltage of **24V DC (+/-15%)**. The power supply provides a voltage of **U=27,6V DC** with an output current of:

1. Output current of 9A + 1A battery charging*
 2. Output current of 8A + 2A battery charging*
 3. Output current of 6A + 4A battery charging*
- Total device current + battery charging current: 10A max.***

In case of power voltage decay, prompt switching to battery supply occurs. The power supply is equipped with short circuit protection, overload protection, overvoltage and thermal overload protection. The power supply is fitted with a fan for forced cooling, switching on depending on the temperature and the load of the power supply.
