## DESCRIPTION

The RN 24V/2,5A (RN25024) is intended for lowering and stabilising DC voltage within the range of 24÷28V into the value of 24V (adjustment 22V÷Uin DC). In the case when the output voltage drops below the preset output value, the transistor opens and the reducer conducts without any loss (voltage drop  $\Delta U$ <1%). That enables full use of energy accumulated in the PSU's battery during batter-assisted operation.

The RN25024 voltage reducer along with a typical buffer PSU is intended for supplying devices that require voltage of 20V÷24V DC.
