Product Data Sheet

DB670
Series 670 Intrinsically Safe TimeSaver Base

General

The DB670 is part of the 670 series intrinsically safe detector line. This TimeSaver Base® is a completely new design that provides an open working area and single quadrant terminals to allow for easier installation.

Installing the DB670

The DB670 is designed to make installation fast and simple. The E-Z fit fixing holes are shaped to allow a simple three-step mounting procedure:
• Fit two screws to the mounting box or surface
• Place the DB670 IS base over the screws and slide home
• Tighten the screws

The base offers three fixing centres as well as a guide on the base interior to indicate the length of cable to be stripped. Five terminals are provided for the cables, four of them grouped together for ease of termination. A remote indicator facility is provided as standard. If it is required that all detectors be fitted with their LEDs facing the same direction, the bases may be fitted to the ceiling observing the marking on the exterior that indicates the position of the LED.

The terminal screws are captive screws and will not fall out of the terminals. The DB670 is supplied with all cable fixing screws unscrewed in order to avoid unnecessary work for the installer.

Standard Features

- Common base for all detectors in the line
- Elegant slim-line design
- Installer friendly design
